Objective: Damage recovery at the municipal infrastructure until 31.12.2018

Location: District Mittelsachsen

Client: District Administration Mittelsachsen

Beneficiary: Department for Road Construction and Maintenance

Period: 2013 – 2018

Project Control and Management

The flood of June 2013 has caused severe damages to the municipal infrastructure of the district Mittelsachsen. Therefore, the district announced over 200 projects to be funded which were approved by the Bureau for Reconstruction. The damages to be funded amount to approx. EUR 25 million.

C&E was awarded with the control and partially with the project management of the projects in the fields of the municipal infrastructure. Main focus is laid on the tight timing and simultaneously the compliance with the budget and quality.

In the scope of the project control an efficient, database-based project accounting was established.

Within the scope of the project control all performance phases and stages of the AHO are provided. In some cases projects are supported by the client itself. For these projects, C & E conducts the financial tracking. The client is also supported in the preparation of the funding applications and the billing of the projects.

Within the framework of the projects, a large number of subjects will be discussed. This also includes questions of how to deal with contaminated sites and problems with groundwater.
