Project objective: The diversion of the Laucha river (1st grade collector in Saale catchment area) is part of the legislation on water design permit procedure within the remediation concept for the landfill Hochhalde Schkopau.

Location: Saxony

Client: Landesanstalt für Altlastenfreistellung

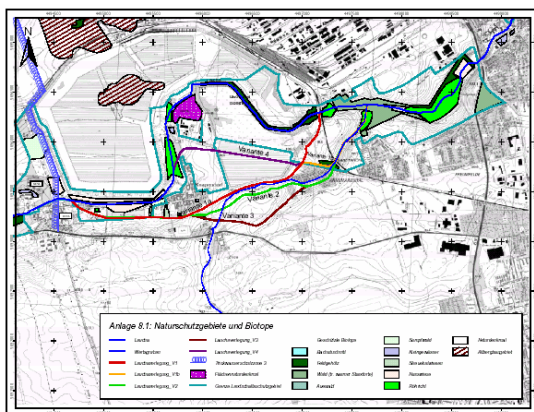

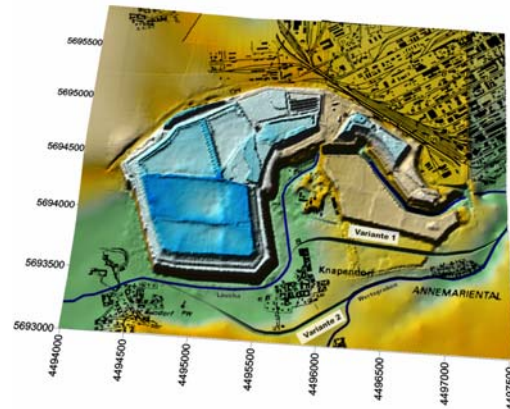

Beneficiary: Landesanstalt für Altlastenfreistellung

Duration: 2004

Budget:

Initial situation:

Main targets of the Laucha diversion are the prevention of contamination from the landfill Hochhalde Schkopau and thus to guarantee the water quality of the Laucha river, flood prevention and creation of the prerequisites for river maintenance on Laucha. Therefore in preparation of the design permit procedure an evaluation of the existing situation as well as the preparation of tender documents for an environmental impact assessment (EIA) were required.

Services provided :

- Review of existing documents, catastro analysis, liaison with authorities and communities, analysis of public opinion
- Detailed analysis of aspects of hydraulic engineering and environmental protection
- Preparation of pre-scoping-documents including information activities of private and public stakeholders
- Tender documents for design permit procedure
- Tender documents for EIA
