Objective: Stabilisation and remediation of the tailing pond Eleshnitsa, construction of the new wastewater treatment facility and solid waste landfill in Dospat

Location: Eleshnitsa, Dospat, Bulgaria

Client: EU/ Ministry for regional development, Bulgaria

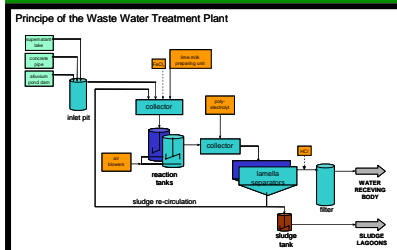

Period: 2002 - 2005

Budget: 2,6 Mio EURO

Initial situation:

The tailing pond must be stabilized using the new surface water discharge system. The remediation activities by dewatering and covering are connected with the wastewater and pond water treatment. The former opencast mining must be used as a solid waste landfill according to the European standards.

Services provided:

Site supervision as a FIDIC-Engineer according the Bulgarian and European legislation, regulations and standards (Bulgarian State Standards) and international standards (ISO)

- Environmental monitoring
