Project Objective: Remedial laboratory investigations and its documentation and evaluation were carried out within the project. The interpretation of the results took place in the context with the hydrogeological, hydrodynamical and hydraulic results of the evaluation of location. Main pollutants: MKW, BTEX, PAK, cyanides, arsenic

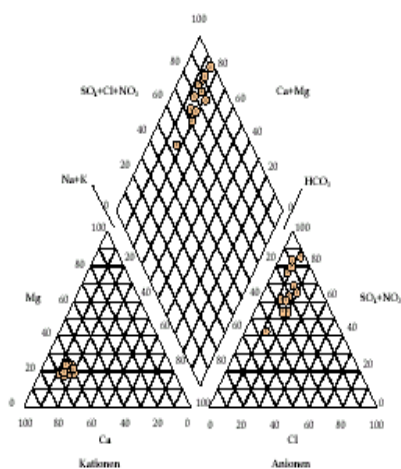

Location: Magdeburg-Rothensee

Client: Federal Association for realisation of contaminants Saxony-Anhalt (LAF)

Beneficiary: Federal Association for realisation of contaminants Saxony-Anhalt

Period: 2003 - 2004

Budget: 140.000 €

Services provided:

- Supervision of the large-scale upstream and downstream flows
- Ascertainment of damage
- Determination of the pollutant discharge
- Risk Assessment
- Groundwater monitoring

The services include groundwater, MNA and surface water analytics as well as evaluation and interpretation of the results
