Objective: Planning of the construction measures for the new motorway feeder road from Auto to motorway A 72

Location: Aue

Client: WISMUT GmbH,
Road Authority Zwickau

Year: completed in 2007

Initial Situation:

The dump 366 was profiled and covered according to the motorway feeder road construction. The reinforced soil was foreseen for the stabilisation of edges of slopes in the street area. As the pilot construction measures there were designed the tunnels in the reinforced concrete, the street drainage including the receiving water was constructed.

The design works included the phases 1 to 9 according the German Fee Scales for Architects and Engineers (HOAI). Construction supervision according to the § 57.
